- VPN configuration and management
- Database Management: SQL Server, MySQL, or Oracle & Linux AIX
- Database performance tuning and optimization
- Backup and Recovery: Backup solutions
- Disaster recovery planning and execution

SUMMARY

I am a Data Analyst with over 10 years of experience in the banking sector, delivering data-driven insights that support strategic and operational decision-making. I have a strong track record of working with large and complex datasets to identify trends, improve efficiency, and solve business problems.

My expertise includes SQL, Python, and Excel, along with advanced skills in data modeling, forecasting, and predictive analytics. I am highly proficient in Power BI, creating intuitive dashboards and reports that translate complex data into clear, actionable insights for both technical and non-technical stakeholders.

Beyond technical skills, I bring strong analytical thinking, attention to detail, and the ability to collaborate across teams. I am experienced in taking ownership of analytical projects end-to-end, from data extraction to insight delivery, ensuring accuracy, reliability, and business value at every stage.

EXPERIENCE

Jan 2025

Data Analyst

National Development Bank, Colombo

Collaborate with IT teams to collect, integrate, and manage large datasets from various banking systems (e.g., transaction systems, customer databases, core banking applications). Ensure data quality, accuracy, and consistency across different databases and platforms. Develop, maintain, and optimize ETL (Extract, Transform, Load) processes to ensure seamless data flow from source systems to data warehouses or data lakes. Create and deliver regular and ad hoc reports and dashboards to senior management and other stakeholders using data visualization tools (e.g., Power BI). Optimize SQL queries and database performance for efficient data retrieval and reporting. Monitor, maintain, and troubleshoot the performance of databases and data storage solutions. Support teams in developing data-driven applications, reports, and dashboards by providing data insights and ensuring data accuracy. Troubleshoot and resolve data-related issues, including inconsistencies in database entries or errors in reporting outputs.

- Server Management: Windows Server (2007, 2008, 2010, 2011)
